Prerequisites

- Oracle9i: SQL, PL/SQL, and SQL
- Introduction to Oracle9i

Course Summary

This course introduces students to the responsibilities of an Oracle® database administrator (DBA). You will learn the underlying architecture of the Oracle database server and the essential tasks required to manage database installations such as how to start up and shut down an Oracle instance. You will also learn the components that comprise a database, practice creating a database, manage database objects, reorganize data, and implement security measures. Finally, you will learn how to troubleshoot real-life scenarios that could occur. This course will help you to prepare for Oracle's exam, Oracle9i Database: Fundamentals I (1Z0-031).

Lessons

- 1 - Overview of Oracle9i Architecture
- 2 - Understanding the Oracle Instance
- 3 - Managing Tablespaces and Datafiles
- 4 - Managing Tables and Indexes
- 5 - Managing Undo Data
- 6 - Managing the Online Redo Log and the Control File
- 7 - Managing Users and Security
- 8 - Globalization Support
